

ELSEWEDY ELECTRIC Power Systems Projects - PSP

Introducing an energetic approach to learning that suits the rapid evolution of EPC industry.

About ELSEWEDY ELECTRIC PSP

Industry : Engineering, Procurement and Construction - EPC

Headquarters: Cairo, Egypt

Employees: 1,500

PSP'S mission

By using LinkedIn Learning as a tool to encourage its people to take an active role in their own professional development, ELSEWEDY ELECTRIC PSP was able to spark passion for learning among staff and employ new metrics to identify its most engaged learners.

PSP is a subsidiary ELSEWEDY ELECTRIC Group. The Group started its business more than 80 years ago, with a vision to position itself as a progressive market leader providing top-notch, integrated energy solutions and products.

Specialising in power generation, water and wastewater, mobility and hydropower projects, ELSEWEDY ELECTRIC PSP is the EPC arm of the group, offering its clients energy solutions while leveraging its engineering and commercial competencies paired with best-in-class digital assets and project management methodologies.

Hesham Hegazy
Chief Executive Officer

PSP ensures the value offered to its clients through designs that guarantee efficient global sourcing strategies, as well as maintaining world class QHSE measures. Sustainability of growth and success can only be guaranteed through continuous enhancement of processes, digital tools, and the development of people's knowledge and competences. The decision to invest in LinkedIn Learning has been embraced by employees as a way of taking control of their own learning and professional growth.

“Building and nurturing a continuous learning culture is how we guarantee we are always future-ready.”

Hesham Hegazy, Chief Executive Officer

“I’ve been the Human Resources Director at ELSEWEDY ELECTRIC PSP for five years,” says Alaa Noufal. “That essentially means I’m in charge of helping people achieve their career goals and ambitions. We aim to create a great working environment based on three key pillars: re-engineering of our processes, digitalization, and knowledge-sharing. We chose LinkedIn Learning because it fits the direction we are heading.”

With employees spread globally across different regions, Alaa says the company requires a seamless and user-friendly learning platform. “To make online learning as simple and intuitive as possible for people working across different regions and time zones, we aimed for a platform that is both convenient and easily accessible at all times, through which our people can learn at their own pace.”

“We worked with our marketing team to create a campaign to internally promote LinkedIn Learning,” says Alaa. “To inspire and motivate our people, we ran a competition where our most engaged learners – those who hit the most hours watched, or completed the most courses – had the chance to win a PlayStation, not to mention our coveted official LinkedIn Learning award! We make sure people are recognized for their learning achievements, encouraging them to share their success stories through our internal communication channels.”

Identifying areas for development across the business using LinkedIn Learning

As Director of Human Resources, Alaa explains the leadership approach to encourage employees' development across the company. "LinkedIn Learning is a really useful tool in terms of visibility," he says. "We can see what people are doing and identify what most engage them. This helps us to analyze and report useful insights to the management team across the organization.

Based on such insights, we can establish people's interests when learning independently, which enables us to assign individualized courses or modules.

Alaa Noufal
HR and Administration Director

LinkedIn Learning may have helped ELSEWEDY ELECTRIC PSP kick-start change, but the real success comes from the willingness and enthusiasm of its people. The business has seen some startling results: "We've created a system that helps us identify our people's competences. Interestingly, we're beginning to identify patterns, seeing a close correlation between the overall performance of those who've used LinkedIn Learning, in comparison to those who spent less time on the platform. This helps us to identify strengths and weaknesses of individuals, and address skills gaps with further relevant training and development."

Alaa is keen to create a long-term partnership with LinkedIn Learning, with focus on creating a bespoke experience for employees to maximize impact. "With the support of LinkedIn Learning, we are now thinking how we can develop and move forward with our learning goals, focusing on specific areas like interpersonal skills to create something of our own."

The challenge:

- To share knowledge effectively across different geographical locations, sometimes in remote areas.
- To re-structure the learning approach to fit the now more digitalized workplace.
- To support and inspire our people to invest in their professional career development via online learning.
- To encourage our people to utilize an online platform that would help them deliver business vision, strategies and objectives.

The solution:

- 1200 LinkedIn active learning licenses for employees located locally and globally.
- Effective KPI measurement to enhance the performance management process and identify areas for learning and development.
- The ability to provide a blended approach to learning, balancing classroom and online learning.
- Adopting a digitalized work environment (when applicable) to ensure the safety and well-being of the people during the global pandemic.

The results:

23,720 courses watched

586,847 videos watched

33,523 hours watched

*Data is from 2020

The people at ELSEWEDY ELECTRIC PSP have been quick to take an active role in their own professional development, demonstrating the platform's success. "This year we've reached 720 active licenses," identifies Alaa. "In addition, we have around 30 sister companies, so in total we now have 1200 active licenses. We are looking to form a long-term partnership with LinkedIn."

What the learners say

“

Being responsible for my own career development and part of its planning is what drew my attention to LinkedIn Learning as an easily accessible, convenient tool for my personal and professional plans; I can access it anywhere through desktop and mobile. My advice to all my team is to exploit the wide range of courses available through LinkedIn Learning as much as possible.

”

Mohamed Amr,
Lead Construction Engineer - Electrical

“

While using LinkedIn Learning, I am particularly interested in courses that can help with the digitalization of my function, as well as the development of certain processes like supply chain management. I am still exploring all the courses that are relevant to my role, and have been interested to find content related to soft skills like communication, empathy, and so on.

”

Noha Swelam,
Supply Chain Excellence Section Head

“

LinkedIn Learning allows us to promote a learning culture within the organization by focusing on enhancing our employees' capabilities and skills. As one of our major requirements, it also offers maximum flexibility, given we are within the construction business. An organization investing in the improvement of its people skills through learning and training can motivate employees to become more engaged.

”

Mohamed Hassan Ibrahim,
Career Development Section Head

“

Whatever skill you need to learn, there is a course to help you. I was particularly impressed by the diversified library of courses available through LinkedIn Learning. I'm really thankful to have access to this tool.

”

Adel Hassan,
Lead Construction Engineer - Mechanical
